Unrefined

Extra Virgin Olive Oil - Organic RBD

- **Item Code:**
S1340
- **INCI Name:**
Olea europaea
- **Extraction method:**
Cold Pressed
- **Processing:**
Organic and non-chemical refining, bleaching, and deodorization

Available Pack Sizes

gallon
3.5 kg

pail
18 kg

drum
55 gallon

Jedwards International, Inc. represents the continuation of a 100 year family tradition in the specialty oils market which started with the processing and refining of cod liver oil in South Boston.

Since its founding in 1994, Jedwards International has worked aggressively to expand its product line to include many difficult-to-source, custom-manufactured materials. Our mission is to supply innovative specialty oils to the food, dietary supplement, cosmetic, soap and candle making markets and to help our customers grow.

Olive Oil has been collected by humans for culinary, medical, and cosmetic use for millennia, largely in hotter climates such as the Mediterranean, the olive's native home. Today, Olive Oil has become one of the most popular oils for cooking and commonly found in personal health care products. The term 'extra virgin' specifies that this is obtained from the first pressing of the olive, yielding a high content of the highly desired oleic fatty acid. The color naturally varies from green to yellow and carries a characteristic aroma and flavor profile. Extra Virgin RBD, on the contrary, has gone through additional refining, bleaching, and deodorization to result in a bland olive oil variety.

Due to a lower smoke point compared to other cooking oils, extra virgin olive oil is best when used in cold or no heat food applications, such as an ingredient in salad dressings. In cosmetic and personal health care products, it acts as a natural moisturizer, conditioning the skin and boosting hair shine. It's often used in the formulation of soaps, lotions, hair treatments, and facial masks.
